

MULTIFAMILY SOLUTIONS

ENERGY SAVINGS FOR OWNERS, MANAGER AND TENANTS

SEEL creates custom-designed multifamily energy improvement programs, with implementation strategies that fit our clients' specific needs. We take a holistic approach to program design, and provide incentives that draw strong engagement from tenants as well as property managers and owners. The results speak for themselves: ongoing, award-winning and highly successful multifamily programs for our clients.

SEEL builds programs that deliver energy savings and customer satisfaction, incorporating one-on-one energy consultations, education, savings measures, and direct installation of energy-efficient products.

Individual programs, which are customized for utilities and other clients, can encompass multiple elements:

- Lead generation and program qualification
- Initial energy assessments
- Holistic energy audits
- Trade ally engagement and management
- Direct measure installation
- Rebate processing and
- Post-inspection QA/QC

At every step, we put an emphasis on educating property owners, property managers and tenants on the benefits of energy-efficiency upgrades and program participation. The high levels of tenant engagement generate additional savings and value for our clients, property owners and management companies. The outcome of our multifamily projects is a reduction in costs and an increase in property values.

 WE HAVE ENTERED MORE THAN 200,000 MULTIFAMILY UNITS, SAVING MORE THAN 150,000 MWH AND 600,000 MCF.

SEEL was awarded the Alliance to Save Energy's 2011 Andromeda Star of Energy Award, which is among the highest national awards for the dynamic implementation and management of a successful energy-conservation initiative within a territory.
